EXAMINER	
VERBRUGGE, K	
ART UNIT	PAPER NUMBER
2751	<i>4</i>

DATE MAILED: 02/09/99

Please find below a communication from the EXAMINER in charge of this application.

Commissioner of Patents

See the attached non-final Office action.

Office Action Summary

Application No.
09/023,172

Applicant(s)
Holman

Examiner
Kevin Verbrugge

Group Art Unit
2751

☒ Responsive to communication(s) filed on Feb 13, 1998

☐ This action is **FINAL**.

☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11; 453 O.G. 213.

A shortened statutory period for response to this action is set to expire 3 month(s), or thirty days, whichever is longer, from the mailing date of this communication. Failure to respond within the period for response will cause the application to become abandoned. (35 U.S.C. § 133). Extensions of time may be obtained under the provisions of 37 CFR 1.136(a).

Disposition of Claims

☒ Claim(s) 1-14 is/are pending in the application.

Of the above, claim(s) _____ is/are withdrawn from consideration.

☐ Claim(s) _____ is/are allowed.

☒ Claim(s) 1-14 is/are rejected.

☐ Claim(s) _____ is/are objected to.

☐ Claims _____ are subject to restriction or election requirement.

Application Papers

☒ See the attached Notice of Draftsperson's Patent Drawing Review, PTO-948.

☐ The drawing(s) filed on _____ is/are objected to by the Examiner.

☐ The proposed drawing correction, filed on _____ is ☐ approved ☐ disapproved.

☒ The specification is objected to by the Examiner.

☐ The oath or declaration is objected to by the Examiner.

Priority under 35 U.S.C. § 119

☐ Acknowledgement is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d).

☐ All ☐ Some* ☐ None of the CERTIFIED copies of the priority documents have been
☐ received.

☐ received in Application No. (Series Code/Serial Number) _____.

☐ received in this national stage application from the International Bureau (PCT Rule 17.2(a)).

*Certified copies not received: _____

☐ Acknowledgement is made of a claim for domestic priority under 35 U.S.C. § 119(e).

Attachment(s)

☒ Notice of References Cited, PTO-892

☐ Information Disclosure Statement(s), PTO-1449, Paper No(s). _____

☐ Interview Summary, PTO-413

☒ Notice of Draftsperson's Patent Drawing Review, PTO-948

☐ Notice of Informal Patent Application, PTO-152

--- SEE OFFICE ACTION ON THE FOLLOWING PAGES ---

Art Unit: 2751

DETAILED ACTION

Specification

1. The disclosure is objected to because of the following informality: four serial numbers are missing on page 2 of the specification. Appropriate correction is required.
2. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

4. Claims 1-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Memory Systems Design and Applications, edited by Dave Bursky, pp. 213-220.

Art Unit: 2751

Regarding claims 1, 2, and 12-14, on page 217 Bursky teaches in the photo caption that "System costs plummet when function duplication is designed out. While most minis duplicate read/write and control electronics for each board of memory DIPs, Interdata makes one read/write/control set serve more memory, by using eight little 'daughter boards.' This packaging also simplifies reconfiguration and speeds up field repair" (emphasis added).

Furthermore, on page 219, third column, he writes that "The PC-board economy is possible through the use of 'daughter boards,' strips that are 8 in. long, 1 in. wide and plug into the 15x15 in. memory board itself. Not only does this mean that 256 kbytes can be packed on the board instead of 32 or 64 kbytes, it also means that function duplication is cut back. As a result, the read/write control logic that would have been duplicated on a series of 64-kbyte boards appears just once on the 15x15 in. motherboard, serving all 256 kbytes. Larry MacPherson, Interdata product manager for the Series Sixteen, points out that this unusual modularity makes it easy to add and subtract memory in the field, and slashes the cost of incremental memory increases" (emphasis added).

Bursky's focus in the passages above is toward the daughter card system of Interdata. However, the underlined passages above

Art Unit: 2751

teach that it was known to use memory controllers on individual memory modules, each of which contained a plurality of memory devices as claimed. In fact, such a design appears to have been the norm. The passages above describe a new (for the time) method of reducing the duplication of the memory controllers by removing them from the memory modules and using a single controller on the motherboard for all memory modules (daughter cards). This is the standard today, and is the admitted prior art of the instant application. However, in 1980 and before, it was common to include the memory controller on each memory module as taught above.

Bursky does not explicitly teach that the memory controller reformats the transactions it receives before passing them on to the plurality of memory devices, however it would have been obvious that such reformatting takes place since memory devices required different format signals than memory controllers. Bursky does not characterize the memory controllers of the memory modules other than to call them read/write/control logic, which obviously meet the broad claim language of handling requests (reads or writes) and controlling transactions.

Regarding claims 3, 4, 5, and 7, the claimed second memory bus is inherent in the memory modules since the module controller

Art Unit: 2751

must be able to communicate with the plurality of memory devices on the module through electrical wires (bus) including address, data, and control lines, which were commonly multiplexed at the time of the invention. It would have been obvious to one skilled in the art to multiplex the bus to save signal lines.

Regarding claim 6, the bus would necessarily include a handshake signal to regulate accesses to the memory in an asynchronous system.

Regarding claims 8-10, Bursky does not mention the claimed buffers, however such elements are inherent in his memory module controller, since the controller certainly was able to hold signals it received from the system bus and transmit them on the module bus to the memory devices at the appropriate times and vice versa, in effect "buffering" the commands.

Regarding claim 11, the controller of Bursky would necessarily include a clock generator and the bus would necessarily include a clock signal to regulate accesses to the memory in a synchronous system.

Art Unit: 2751

Double Patenting

5. A rejection based on double patenting of the "same invention" type finds its support in the language of 35 U.S.C. 101 which states that "whoever invents or discovers any new and useful process ... may obtain a patent therefor ..." (Emphasis added). Thus, the term "same invention," in this context, means an invention drawn to identical subject matter. See *Miller v. Eagle Mfg. Co.*, 151 U.S. 186 (1894); *In re Ockert*, 245 F.2d 467, 114 USPQ 330 (CCPA 1957); and *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970).

A statutory type (35 U.S.C. 101) double patenting rejection can be overcome by canceling or amending the conflicting claims so they are no longer coextensive in scope. The filing of a terminal disclaimer cannot overcome a double patenting rejection based upon 35 U.S.C. 101.

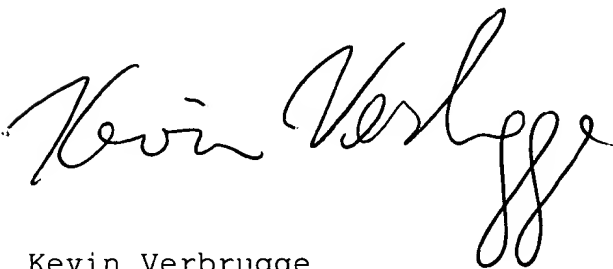

6. Claims 1-14 of this application conflict with claims 1-17 of Application No. 09/023234 and with claims 1-20 of Application No. 09/023170. 37 CFR 1.78(b) provides that when two or more applications filed by the same applicant contain conflicting claims, elimination of such claims from all but one application may be required in the absence of good and sufficient reason for their retention during pendency in more than one application. Applicant is required to either cancel the conflicting claims from all but one application or maintain a clear line of demarcation between the applications. See MPEP § 822.

Art Unit: 2751

Conclusion

Any inquiry concerning this or an earlier communication from the Examiner should be directed to Kevin Verbrugge by phone at (703) 308-6663.

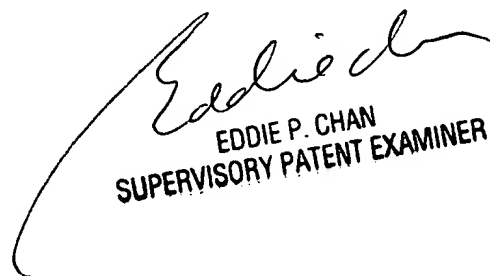

Any formal response to this action intended for entry should be mailed to Commissioner of Patents and Trademarks, Washington, D.C. 20231 or faxed to (703) 308-9051 or -9052 and labeled "FORMAL" or "OFFICIAL". Any informal or draft communication should be faxed to (703) 308-5359 and labeled "INFORMAL" or "UNOFFICIAL" or "DRAFT" or "PROPOSED" and followed by a phone call to the Examiner at the above number. Hand-delivered responses should be brought to Crystal Park II, 2121 Crystal Drive, Arlington. VA., Sixth Floor (Receptionist).
